

Lab 4 IAM Responsibilities

Task 1

create an IAM User

- Name: **student01**

Step 1

Specify user details

Step 2

Set permissions

Step 3

Review and create

Step 4

Retrieve password

Specify user details

User details

User name

student01

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and +, -, @, _ (hyphen)

☒ Provide user access to the AWS Management Console - optional

In addition to console access, users with `SignInLocalDevelopmentAccess` permissions can use the same console credentials for programmatic access without the need for access keys.

Console password

☒ Autogenerated password

You can view the password after you create the user.

☐ Custom password

Enter a custom password for the user.

☐ Show password

☒ Users must create a new password at next sign-in - Recommended

Users automatically get the `IAMUserChangePassword` policy to allow them to change their own password.

1

If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user.

User name

student01

Console password type

Autogenerated

Require password reset

Yes

Permissions summary

Name	Type	Used as
IAMUserChangePassword	AWS managed	Permissions policy

Tags - optional

Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user.

No tags associated with the resource.

Add new tag

You can add up to 50 more tags.

Console access ✕

As a best practice, enable MFA for users who have console access.

[Enable MFA](#)

- Step 1
Select MFA device
- Step 2
Set up device

Select MFA device [Info](#)

MFA device name

Device name

This name will be used within the identifying ARN for this device.

Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

MFA device

Device options

In addition to username and password, you will use this device to authenticate into your account.

☐

Passkey or security key

Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.

☒

Authenticator app

Authenticate using a code generated by an app installed on your mobile device or computer.

☐

Hardware TOTP token

Authenticate using a code generated by Hardware TOTP token or other hardware devices.

[Cancel](#)[Next](#)

Step 1

Select MFA device

Step 2

Set up device

Set up device [Info](#)

Authenticator app

A virtual MFA device is an application running on your device that you can configure by scanning a QR code.

1

Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.

[See a list of compatible applications](#)

2

Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key. [Show secret key](#)

3

Type two consecutive MFA codes below

Enter a code from your virtual app below

Wait 30 seconds, and enter a second code entry.

Cancel

Previous

Add MFA

✔

MFA device assigned

You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.
